Q: Deadlock while trying to create a file on a webserver I'm using the following code to create a file on a webserver, but when I execute the following line of code I'm getting a deadlock. The file is being created, but I get the deadlock. FileStream fs = new FileStream(filePath, FileMode.OpenOrCreate, FileAccess.Write); System.IO.File.SetAllBytes(filePath); fs.Close(); fs.Dispose(); How do I resolve this? A: It looks like in your case you are trying to create a file via ASP.NET. ASP.NET is a multi-threaded system and uses asynchronous I/O. In your example code you are blocking and synchronizing on the file creation. Check out this post for more information on multithreading in ASP.NET. A: I suspect that whatever process you are starting via the HttpRuntime.AsyncInvoke() API is not actually completing the task. You're allowing your app to run in the background for some period of time, and this API call is a background operation. I suspect that instead of something like FileStream fs = new FileStream(), you need to change that to a worker thread call to HttpRuntime.BeginInvoke() (which will then 'grab' the thread and suspend it) and, within the thread, use the filesystem APIs to create your file. You can even use the heal tool to add texture to your image or erase dark shadows from your image. The Soften brush is similar to the heal brush, but it affects the edges of your images. This brush can be used to create an effect where the edge of an image is blurred. This effect can be used to soften an image or to add a faded effect to an image. The Spot Healing Brush tool is a powerful tool for repairing small issues, such as small blemishes, scars, or partial erasures. It has a lot of control options, including the ability to scan an area of your image that is under consideration to make a repair. This tool is available in Photoshop CS4. The Smart Brush is a powerful brush used to apply one of many variations of adjustments. You can use this brush to restore color, refine skin tones, correct photos, or fix details within images. Painting The new paint bucket allows you to use a variety of different brushes. You can edit each brush with the property box and control the size, opacity, and other attributes of a brush. You can use this tool with many different settings, including brushes, blend modes, hard/soft edges, and the shape of the eraser's edge. The Shadow tool has similar settings to the paint bucket.
