AutoCAD is an acronym for "Auto Computer Aided Design." The first model was the NS-300, which was shipped in 1983. The first full-featured version was AutoCAD II, introduced in January 1985. You can use graphic editing tools to modify existing objects and create new ones. You can use multiple views and layers to increase your efficiency in creating documents. AutoCAD exports drawings to PDF, SVG, DWF, DXF and DWG. You can link the text directly to an existing drawing in the same drawing file. You can create multipart text items in the same drawing file. Legacy In 1995, Autodesk stopped selling the Workbench product line as a result of the release of AutoCAD 1998. AutoCAD 97 remained supported by Microsoft. In 1999, Autodesk released a Linux port of AutoCAD called Cedega, followed by a Windows port in 2001. Autodesk discontinued support for Cedega and the Linux AutoCAD product in 2012, and discontinued development of the Windows AutoCAD product in 2015. File format AutoCAD files are grouped into two types: DWG and DXF. DWG is a proprietary file format. Its name stands for "Drawing Workspace Format" and describes its file structure. It is more complex than DXF, and contains numerous keywords. It was introduced in AutoCAD release 16. It allows the user to customize many aspects of the document, such as image handling, font lists, text, colors, linetypes, etc. It has a layer system, allowing layers to contain blocks with individual attributes, such as color, linetype, lineweight, etc. The format is used to create the majority of AutoCAD drawings, and may also be used to create Word or Powerpoint documents with a layer system to produce complex graphical layouts. DWG can also include mathematical formulas. DXF is the native format of AutoCAD. It is a binary, text-based format. It has a simpler structure than DWG, and many of the AutoCAD options are either built-in or supported by predefined keywords. A DXF file contains only a single drawing. DXF was created by Acorn Computers Ltd. to replace its previous DGN format, which was a clone of the GE DGN format. The DXF format was adopted as a standard by CAD users. The IFC standard is a further extension of DXF. The files can be created directly in Autodesk's DesignCenter, or can be exported from a variety of products. Autodesk products and third-party software also create PDF files, which preserve the layout, but not the design. In 2015, Autodesk announced that it would stop supporting the DWG and DXF file formats, and will instead focus on native formats such as IFC, STL, ODB and CATIA. When AutoCAD 2.6 was released, the DXF format was replaced by the ACIS format, which is similar to a1d647c40b
