AutoCAD history AutoCAD was originally developed by Mitchell Carlson, Bill Jelnic, and Steve Sheppard. Before they were hired by Autodesk, the team was hired by Xerox to develop certain components of the Xerox Star. The two main developers in Autodesk, Carlson and Sheppard, decided to leave the project when they felt their contributions were not being properly recognized and valued. The initial development was funded by Autodesk as well as by a grant from Xerox. The decision to release a desktop program was made in order to ease the burden on the users of the mainframe-based products at the time, and

because the software was developed for both mainframe and desktop environments. In the 1980s, the use of mainframe computers was declining and increasingly so at the same time that the price of microprocessors was falling. Due to this market situation, Autodesk felt that desktop systems would be more useful to their customers than the mainframes. The first version of AutoCAD was released in December 1982 for use with the Micro Iix and II computer systems. In 1988, the software was ported to the Macintosh. In 1999, Autodesk released the first version of AutoCAD for Windows. This was followed by AutoCAD 2000 in 2001, AutoCAD LT in 2002, AutoCAD 2004 in 2004, AutoCAD 2005 in 2005, and AutoCAD LT 2007 in 2007. In October 2010, Autodesk released AutoCAD 2010, which added a Windows Tablet Edition. In addition to the main editions, which are available to use and download for free from Autodesk, the product is also available in Lite versions (AutoCAD LT, AutoCAD LT 2007). Updates to the software are

issued several times a year, typically in June, September, and December. In between major releases of AutoCAD, minor releases are released more frequently.
