Windows-software to calculate the optimal datarate It is our firm belief that optimal video and audio encoding parameters are not identical. They differ depending on the medium used, the resolution, color depth, bitrate, size, frame rate and you name it. In addition, it is possible that the external encoder behaves differently when compared to an internal application, such as one of our player software or even Windows Media Player. In such a situation, you can easily fall into the trap of choosing different datarates for videos encoded by different applications or external encoders. Using the Media Calculator, you can check if the datarate you think will work is actually correct or not, as the application has the capability to calculate the optimal datarate for your selected values. Media Calculator has been designed to help you get a quick idea about encoding parameters. The application helps you find out the optimal datarate, so that you can encode your desired video. Media Calculator is a very simple to use calculator, with a focused user interface. You can easily navigate through the application, and find the optimal datarate for any specific video or audio setting. Media Calculator allows you to set datarate settings for videos of specific sizes or specifications, making it a very useful tool when it comes to estimating encoding settings. Media Calculator has been designed to show the best datarate for specific settings and resolutions, in case you need to estimate encoding parameters on the spot. The program is a very robust media datarate calculator, as it can always choose the best datarate depending on a variety of video and audio settings. If you are looking for a very lightweight application to calculate the right datarate, then this is your app. You can simply set different encoding parameters to have an idea about the datarate and choose the datarate that you will need for your desired setting. Media Calculator calculates the optimal datarate of multiple resolutions and file types. The application is a very simple to use application, with a focused user interface.Q: Php and Selenium problem
