HighRoad Crack+ PC/Windows

HighRoad is an interactive environment for designing a road network. Roads are constructed and intersected, cul-de-sacs created and intersections design optimized within HighRoad. A top down perspective approach allows the user to see the layout of the design and keeps the whole system design visual and intuitive. HighRoad provides a powerful road design environment to design roads that comply with relevant engineering standards. You will design roads that cross each other with a horizontal or vertical intersection, that cross watercourses or streams, that cross existing roads and including detention basins and cul-de-sacs, as well as roads that have a central island. Roads can be designed for maximum efficiency but you can also design more elegant roads or streets. HighRoad's drivers include sophisticated algorithms to optimise the design and make it easier and faster to produce. HighRoad contains many features to help design the best way to accommodate for road users, including road users with different vehicles, such as car, truck, bus, wheel chair, horse, pedestrian, bicycle, roller, etc. A variety of road users and their associated vehicle types are all accounted for. HighRoad's road design environment allows you to design road networks with a variety of routing algorithms and can generate route plans suitable for a number of different purposes including haul roads, vehicle repair, strategic route planning, new development and highway expansion. HighRoad's technology can be used in conjunction with other useful software packages for road design, including PAS 220. The intersection design in HighRoad can be combined with that in PAS 220 or other options to provide the user with additional features. Features of HighRoad: 1.HighRoad is an easy to learn, easy to use and powerful software.The design of roads is intuitive and can be quickly created.It doesn't have the limitations of drawing or calculating experience. 2.HighRoad is able to draw and calculate complex layouts of roads that link on many levels without running into problems.In addition to the capacity for the simultaneous layout of roads and their intersections, HighRoad can also calculate how your roads will interact with each other as they are mapped into a plan. 3.When you design roads, HighRoad will automatically maintain and recalculate the shape, location and cross connections of the roads while you make changes to the layout.HighRoad can be used to design roads for a multitude of purposes from highways to country roads to local residential roads.HighRoad also has the capability to design roads

HighRoad is an interactive software for the planning and design of roads and highways. It has the following features. *Design roads and highways visually using a drag and drop interface, and then adjust them as required on screen or re-export as high-resolution DWG or DXF files. *Generate plans from the designed roads and highways, and provide the necessary calculations for using them as input to multi-material piling, trenching and ground improvement contractors. *Calculate the loads and stresses on existing roads and highways by adding extra lanes and traffic volumes. *Design grading ramps, tracks, embankments, pavements, finishes and traffic calming devices. *Design the ground surface over old roads or pavements for a new road, including the programmatic placement of new sub-base. *Generate construction details using a range of national standards including Australian PEDB, AASHTO, AS1085 and FASTRB. *Use embedded intelligence to automatically adjust roads, intersections, culverts and ramps to match the new design. *Automatically maintain the plan, design, and construction details as you make changes to the roads and highways. *Draw design layouts for roads, highways, surfaces, structural details and diagrams. *Provide a means to measure and record the geometrical details of roads, at any time and for any stage of construction using the WAVERMOL programmer. *Use the advanced plotting features of the WAVERMOL utility to produce an accurate scale construction drawing which can then be archived in PDF and DWG. *Calculate earthwork costs using the program's internal or customised earthwork program. *Lay out and produce construction drawings from the designed roads and highways, either in DXF or DWG format. *Produce construction and progress diagrams to use as claims for the construction or maintenance of roads and highways. *Produce detailed layout plans and construction specifications in compliance with standards including AASHTO, PEDB, WAVERMOL, and FASTRB. *Draw highways from the plan as a series of connected paths. *Design and plan underground utilities and facilities such as power, water, and communications. *Design and plan landscape features such as bridges, retaining walls, recreation facilities, and wind turbines, and produce construction and progress drawings. *Track the progress of construction projects and plan and design construction details using ground improvement contractors. HighRoad for Windows 7 is available as a choice of the OS. In order to run the software you need a copy of the following: You should make sure your chosen OS is listed as one of the choices when you download the trial version of HighRoad. Note that the trial version cannot be installed as an "Exe" file on Windows 7 and can only be downloaded via a link. Download HighRoad from the link above and follow the steps after downloading to complete the installation. Running HighRoad on Windows 8 may require that you download and install the latest available version of the Windows SDK 8.0 . HighRoad is a powerful, yet easy to use, road and highway design software. Its intuitive interface and intelligent design tools ensure that you only have to think about the road you're drawing and not about a complex array of settings and formulae. The last version of HighRoad for Windows was Release 18.1 (v18.1.0) published 25 December 2014. For older versions please see HighRoad Versions. HighRoad is also available on Mac OS X and Linux for commercial use.
