Enter the following command: `Autocadmap -i c:\AutoCAD.ini` You will be notified if there is a key present for the license and the user ID. If the user id is correct the key will be registered. If the user ID is incorrect the key will not be registered. The present invention relates to locking devices, and more specifically, to a self-locking screw cap which securely locks the contents of a container. All of the known self-locking screw caps have the screw cap-receiving mechanism embedded in the side wall of the container. A problem with such caps is that any attempt to tamper with the screw cap and replace the cap will dislodge the cap from the receptacle in which it was originally installed. Also, if the cap is locked onto a container by a locking device, such as a padlock, the cap cannot be removed by a thief who wishes to steal the contents of the container. Accordingly, a principal object of the present invention is to provide a self-locking screw cap which is securely locked onto a receptacle to prevent removal of the cap by a thief. Another object of the present invention is to provide a self-locking screw cap which is usable with the standard externally threaded closure receptacle of a container. Still another object of the present invention is to provide a self-locking screw cap which is usable with a standard externally threaded closure receptacle to prevent removal of the cap by a thief. Still another object of the present invention is to provide a self-locking screw cap which is usable with a standard externally threaded closure receptacle to securely lock the contents of the container, thereby preventing removal of the contents by a thief. Yet another object of the present invention is to provide a self-locking screw cap which is usable with a standard externally threaded closure receptacle to be securely locked onto the container, but which may be easily removed by a user. Still another object of the present invention is to provide a self-locking screw cap which is usable with a standard externally threaded closure receptacle to be securely locked onto the container, and which provides a tamper-proof feature to prevent removal of the cap by a thief. These and other objects will be apparent to those skilled in the art.);
