What is an audio file? A typical audio file has the.wav (or .mp3) extension which indicates that the file contains raw audio data. If a file has the extension.wav it has always been compressed. A compressed file has the .wav extension if it has been compressed using the lame format. What is an audio mixer? The audio mixer lets you control the volume of the playback channels of an audio file and move them around. A mixer also has multiple send and return audio tracks and sometimes lets you mute and un-mute the channels. What can foobar2000 do? You can preview a file, and navigate through a file using the mouse. You can load and save files. You can play

a file, advance through its sequential recording, start a playback, and stop it. You can jump to a song, and step forward or backward through the song. You can flip through the songs of a playlist. You can move a song to the play queue. b7e8fdf5c8

This DSP module reads a tab-separated list of channels and pops them at a given position in the playlist order. It is more flexible than the normal Matrix Mixer by being able to swap the channels naturally and automatically, swap channels with Custom Mixer instead of with the Matrix Mixer and let the user manually control the volume of the mix. Channels may be named and this feature is accessed through the MIDI controller settings screen. Presets include: □ Multichannel Mixing - ideally suited for when one track is being mixed into the Pre-defined or custom Matrix Mixer presets (see below). □ Custom Mixer □ Static Mixer If you want to have a different channel order, you can swap it through the configuration in the Interactive settings. To use this module, you will need to place all the channels in a pre-defined order. This is where the presets come in. Any number of channels may be popped. But be careful when using them, as they will automatically populate the custom matrix preset channels. Multichannel Mixer □ 7 Matrices □ 36 Matrices □ 20 Matrices □ 9 Matrices □ 2 Matrices □ 1 Matrices □ 8 Matrices □ 4 Matrices □ 2 Matrices □ 15 Matrices □ 2 Matrices □ 10 Matrices □ 15 Matrices How to use: Drag all the channels you want to mix to the order you want them to be in and drop them in. This is the order I use: □ Left Matrices □ Center Matrices □ Right Matrices A -B -C The configuration options are explained through the user interface. With or without presets, you can use Custom Mixer to swap the channels manually, as well as the other effects.
