****What Is a Layer?*** In this program, a _layer_ is an object, template, or selection that works independently of other layers, but can be used in any location within a multi-layer image. In the figure, shown in Figure 6-1, the first and second layers are different images. They are being applied to a new file (Layer) because they have been assigned different names. The image that is in layer 1 is about three-eighths the size of the image in Layer 2. The image in layer 3 is about seven-eighths the size of the image in Layer 1. Using different sizes in the layers allows for greater versatility with your work. The most common process in Photoshop is to create a new file with the layers (combine multiple images or images of different sizes) and then add your image editing. Umm Zakiyya Umm Zakiyya () was the only daughter of the eighth ancestor of the Islamic prophet Muhammad, as well as the first wife of the Prophet. Family She was born in Medina as one of the children of her father Abu Talib. Her mother was a slave girl of the same name, who was a captive of the Quraysh tribe, and her father had married several more wives. Marriage The marriage of Umm Zakiyya occurred in the month of Sha'ban (the month of Ramadan) in which the prophet, as required by the verse of the Qur'an: "Allah has decreed that you worship none but He, and that you be kind to your parents" (4:23). In the narrative of Islam, this verse appears in the Qur'an on the day of the march of the Prophet to meet the Quraysh at the al-Aqsa Mosque in Jerusalem. It is narrated that the prophet was in need of a girl. His uncle Talib advised him of two girls: Umm Zakiyya and Um Talha, as well as three other virgin daughters of the Prophet. He sent for all his nephews to discuss what he should do. All of them thought that the virgin daughters would be better for the prophet and he preferred their virgin state for their father, while his uncle thought that the wife's wealth would benefit the prophet, if it came from her. Talib therefore advised him to marry Um Talha to increase the family's wealth, but his nephews rejected the idea. It was then agreed that Umm Zakiyya should be married. Issue Umm Zakiyya had eight sons and three daughters. All eight sons were born in his father's lifetime, and were alive in his own lifetime. Ali was the first born son of Umm Zakiyya. He was a great devotee of the prophet and he is known as the Fatimah of the Shia, who is held in the greatest reverence among the Shia. Ibn Khallik and his sister Ayesha In some historical texts, the name of his son is stated as 'Ibn Khallik'. In some others, the name of his daughter is stated as 'Ayesha'. Modern scholars, based on some verses of the Qur'an, have stated in books such as 'The Qur'an in the Life of the Prophet' that Abu Talib

A swash-plate compressor for compressing refrigerant of a vehicle air conditioner is provided with a rotor that rotates inside a housing that defines an inside portion and an outside portion. The rotor is provided with a plurality of vanes arranged in a blade array where each vane is separated from its adjacent vanes by a blade base. The vanes are each formed with a vane portion for leading the refrigerant thereon and an airfoil portion for compressing the refrigerant. Each vane is further provided with a base seat and a tip seat. A vane tip is formed with the tip seat, and the vane base is formed with the base seat. The tip seat is provided with a vane surface portion having a contour formed with a shape for leading the refrigerant. The tip seat further has a pressure receiving surface for receiving a load. The compression process of a swash-plate compressor is conducted such that the vanes, which are in close contact with the housing, are brought into contact with the housing and slid along the inner periphery of the housing. However, if a clearance is present between the outer periphery of the housing and the inner periphery of the vane, heat is dissipated from the vane at a relatively high efficiency. This allows the vane to reach a high temperature, which may cause the vane to deform or wear. Japanese Patent No. 3683937 proposes a method of preventing the vane from thermally deforming and wearing. The proposed method is capable of effectively dissipating the heat through an air passage. However, the method requires a large number of components and complicates the construction of the compressor. The present invention has been made in view of the above circumstances and aims to provide a swash-plate compressor that can dissipate heat efficiently and thus prevent the vanes from deforming and wearing.Clinical outcomes of intracranial aneurysm surgery without use of intraoperative microcatheters. **OBJECTIVE** Clipped treatment of intracranial aneurysms can be technically challenging. Use of an intraoperative microcatheter can facilitate this approach. To study the role of intraoperative microcatheters for surgical clipping of aneurysms, differences in clinical outcomes were analyzed between two different clipping approaches: microcatheter-assisted clip application (MAC) and direct clip application (DC). **METHODS** A retrospective review was conducted on consecutive patients who underwent clipping of intracranial aneurysms
