What's New In?

Maximum security of your data and files from unauthorized users and snoopers. What's new in this version: -- Bug Fixes -- Improved User experience Universal Shield is easy-to-use antivirus for your data and files, that prevents other users from gaining access to them by locking down any Windows operation, as well as allows you to view and edit your files. To protect sensitive objects, you can limit an access to protected objects in a wide variety of ways, marking them as read-only, protecting them with a password, as well as restricting or encrypting files and folders. Universal Shield works quietly in the background, so you won't even notice it when you work. Great Security Universal Shield gives you complete control over your files and folders. It restricts access to a large variety of locations and prevents users from sharing protected files. Thanks to encryption, Universal Shield provides an additional layer of security to protect your data. Universal Shield is easy to use. Start the program, start your work and forget about it. Universal Shield will take care of all security related tasks, doing them for you. Filtering your files Universal Shield allows you to specify the name of the objects you want to protect. You can prevent users from accessing them, such as Windows files, folders, registry keys, configuration files and Windows settings. Thanks to an in-depth search function, you'll be able to find the objects you want to protect quickly. Saving your settings Universal Shield lets you save a list of protected objects and edit the properties of any file or folder you want. Changing the language Universal Shield has English, Polish and Slovenian default language, as well as a wide range of other UI languages to switch between. In addition, it allows you to make changes to the UI frame by frame (3 frames). Universal Shield is the simple and intuitive antivirus you need to secure your files, folders and disks. Get even more from your computer Universal Shield carries out a task swiftly and error-free, while using only a small amount of CPU and RAM. Universal Shield is an easy-to-use antivirus for your data and files, that prevents other users from gaining access to them by locking down Windows operations, as well as allows you to view and edit your files. To protect sensitive objects, you can limit an access to protected objects in a wide variety of ways, marking them as read-only, protecting them with a password, as well as restricting or encrypting files

System Requirements For Universal Shield:

The gecko.js library is written and maintained by a small team of developers who are working with only the latest versions of Firefox, Chrome, Safari, and Microsoft Edge. The library is built to run with as few constraints as possible so that it can be used by as many websites as possible. The only requirements are that you have a browser that supports HTML5, the ability to access the network, and JavaScript. For more information, please visit: Version 1.0.3 Updated:
