The different types of layers Photoshop uses are known as: · Dropouts and other layer types for special effects · Layers for image composition and organization · Paths for artwork · Masks for partial or partial image editing · Gradients for color overlays and designs You can also use the tools to make countless effects possible such as for photos, videos, and web graphics. You can easily use Photoshop's tools and results to create any kind of layered document. * * * Using Photoshop Elements in a way that it was never designed to be used Photoshop Elements is created to be used for all your basic photo editing needs. When you first open a photo, you start with the tools on the left side of the screen in their normal state: the Normal, Hue/Saturation, and Curves palettes. The main feature of Elements is that you can add layers, such as clothing, text, and scenery. This enables you to adjust the components of your image — adjusting the color, highlights, or shadows for example — as you would when working in a traditional photo editor. However, Photoshop Elements was never intended to be used like a paint program. You cannot paint over other layers or erase over them; you cannot easily make any complicated selections or paths; and you cannot add more than three adjustment layers. Photoshop Elements is designed to be a tool for basic photo retouching. It is a tool that, when used properly, can save you time by reducing the need to take multiple steps to bring an image into proper focus. However, it is not a good choice if you want more elaborate editing of your photos. * * * Getting the right gear for Photoshop Photoshop is a professional-level tool that requires some serious hardware. The last thing you want to do with Photoshop is spend hours tweaking your photo only to be disappointed when you get it back from the lab and find that some object is blocking your subject. To achieve excellent results, you need to start with a camera that's in good condition, lenses of good quality, and a monitor with a decent color space and resolution. Of course, you'll also want the most memory available to Photoshop (or at least to your graphics program) so that you can save more often. It's also a good idea to have a graphics tablet available. Photoshop CS6, CS6 SP1, CS6 Update, and Elements 12 have built

Q: Hibernate. FindOne() Throws NullPointerException when loading entity from database I have a Person entity which has a foreign key to a Parent entity. I'm trying to get a Person object from the database. My retrieve code: [...] Person p = (Person) h.findOne("FROM Parent p WHERE p.id = :id", id); [...] public Person retrieveFromDatabase(int id) { [...] Person p = h.findOne("FROM Parent p WHERE p.id = :id", id); [...] return p; } My entity: @Entity public class Parent { @Id @GeneratedValue(strategy= GenerationType.IDENTITY) protected Long id; protected String name; } @Entity public class Person { @Id @GeneratedValue(strategy = GenerationType.IDENTITY) protected Long id; @OneToOne(optional = true) protected Parent parent; } This throws a java.lang.NullPointerException when calling h.findOne(): org.hibernate.HibernateException: No Hibernate Session bound to thread, and configuration does not allow creation of non-transactional SessionFactory at org.hibernate.impl.SessionFactoryImpl.getCurrentSession(SessionFactoryImpl.java:692) at org.hibernate.impl.SessionImpl.get(SessionImpl.java:221) at Project.RetrievePerson.retrieveFromDatabase(RetrievePerson.java:36) at Project.RetrievePerson.main(RetrievePerson.java:23) Now I know that I need a non-transactional session to call findOne(), but I don't want to create a new session, I want to use the one which I already have. I'm not sure what I'm doing wrong here. Can somebody help me?
