It has support to track and record the status of other programs, such as Windows, Office, Mac OS, iPod etc.In a structure using a material of strength generated by compressive stress, such as a sandwich beam structure, a concrete pore structure, or the like, a problem may occur where the total amount of stress acting on a part of the material decreases depending on the progress of a certain phenomenon in the manufacturing process. In a sandwich beam structure in particular, when a small crack occurs on a structural member, stress concentrates in the vicinity of the crack, and a notch may occur in a local area of the structural member. This phenomenon where a notch of a structural member occurs will hereinafter be described with reference to FIGS. 16A to 17B. FIG. 16A is a diagram showing a state of a structural member that is not yet subjected to a fatigue test. FIG. 16B is a diagram showing a state of the same structural member after fatigue tests have been carried out. According to the results of a
