Lawrence is a panelist on the American Society of Composers. Barbara Barnes is a local pianist and composer..

Foundation for Newborn Research, Inc. Somatostatin-mediated enhancement of dopamine D2 receptor binding. Somatostatin inhibits basal forebrain dopaminergic cell activity and induces a paradoxical reversal of its effects in the presence of the dopamine receptor antagonist, haloperidol. The present study examines the ability of somatostatin to modulate the binding of [3H]N-propyl norapomorphine ([3H]NPA) to somatodendritic dopamine receptors in rat brain. Somatostatin enhanced [3H]NPA binding sites in the nucleus accumbens and striatum but had no effect in the substantia nigra or median eminence. The effect was dose-dependent and was reversed by the simultaneous administration of either antiserum to somatostatin or haloperidol. Inhibition of somatostatin receptors with the D-antagonist, alexidine dihydrochloride, had no effect on basal dopamine receptor binding. Somatostatin increased [3H]NPA binding sites in striatal membrane fractions only from animals which were dosed daily for

4 days with haloperidol, suggesting that the effect is secondary to the syndrome observed in the presence of haloperidol. These data suggest that somatostatin alters the affinity and/or density of somatodendritic dopamine receptors in the brain. OMD has signed up chief executive Ian McLeod to jointly manage OMD's international operations, according to
