Q: Get a class from any JFrame? I have a class with some methods:

```
public abstract class MyClass { ... public void myMethod() { } ... }
```

Now I have several JFrame which all extends JFrame I know I can get a class from a JFrame by using a getter, like this:

```
JFrame frame = new JFrame();  
JPanel panel = (JPanel) frame.getContentPane();  
MyClass mC = (MyClass) panel.getClass();
```

And I can call methods on mC, but I cannot instantiate it, because it is not a full class (it is just a single method) My question is, is there a method to get the class, but not an instance? Like the first parameter to getClass() is Class? A c6a93da74d
