Looking at how the previous two FIFA titles tackled the technical aspects of the sport, the attention to detail was one of the biggest areas of change in FIFA 17. Beyond FIFA 17's new audio engine, FIFA 17's major change was to the physics engine, which included several new ball attributes, new player movement physics, improved ball collision response, and a new camera system that moves with the ball. The new visuals give the game a more realistic look and feel, but it also means that the game benefits from increased levels of detail in player uniforms, player physiques and player likeness. A major area of change was the introduction of line-of-sight. This key feature allows the ball to behave as if it interacts with the offside line, affecting where players can run, pass, and shoot. The inclusion of the goal function assists players who want to play the game using only football, and is now built in, rather

than users having to turn it on as a FIFA Ultimate Team Legend bonus. The aim of this line-of-sight was to make the game more like the real thing, more lifelike. If you're interested in how FIFA Ultimate Team is going to evolve in the future, as well as seeing the first version of the game, you can watch the EA SPORTS FIFA 20 Webisode on Monday. Here are the times: It will be interesting to watch where this goes. What I've found out, too, is that the Soccer African Cup of Nations has been going for over 40 years. Fifa, recognising the success and tradition of the tournament, is bringing it forward a year. It will still be held in Ghana and Equatorial Guinea over the next 15 months, but this year it will be played in South Africa.
