(note: there are two files, a package and a package.xml. do not double click the package.package file!) nexus - game mod activator will open the 'nexus' folder. open the 'nexus' folder. it will have a subfolder titled 'interface' with the 'interfacehex' file, 'nexus.ini' file and 'readme' file. click on the nexus.ini file and scroll down to the bottom of the page. this section has the following tag and description: unzip the file and place the 'interfacehex' file in the 'interface' folder. this process will set up the mod, taking you to the first menu for customizing your character. in nexus - game mod activator, right click the 'interface' folder and select 'new'. this will pop up a dialog box that says: set these properties? (use yes) (click 'yes' to continue). enter a screen name and select 'male model'. if the mod is set up for female character, use 'female model' as your option. this will be your default new character name. enter a screen name and select 'sexuality' into the 'optional attributes' box. for both male and female options, select 'submissive'.
