# The plugin handles ACE archives from

what I understood. # It can work with any archives which their filenames start with "!ACE\_ ". # However if you try to open ACE archive which has the name like "!ACE\_!another ACE Archive Name" # You'll get unhandled error(s) in the console. # To be fair, I opened only archives with the name starting with "!ACE\_ " and it opened ACE archives without problems. # But I'm not sure that there is no another way to handle the other case. # If you need to handle the rest case, just send me a PM. # Currently, the plugin supports these ACE archives(unace format): # Unace.en.cue (cen format) # Unace.en.unace (unace format) # Unace.it.unace (unace format) #

Unace.es.cue (cen format) #

Description: This is the first WAV module that i have ever written, i was seeking help from the PeaZip Dev Team to see if this project would be appreciated and they left me a quick answer, thats awesome. It sounds incredible! This project is packed with the best of the easiest and fastest method to convert WAV to MP3 with all the tools in the same easy to use interface. Using the built-in WAV2MP3.exe, the only thing that you need is to enter the audio files to convert (can be converted to MP3 while the files are playing, streaming and be

saved after conversion). The best part is that after the conversion, the resulting MP3s will be in the exact same folder as the WAVs, no need to keep them somewhere else, this plugin makes this easy. This module works perfectly for every situation, you will not see any problem when using this plugin, at all.
