Adobe has built the highest performance editing experience in history. Beginning in 2020, the team is rolling out Deliver streamlines the experience of opening, routing, moving and resizing content where it is needed, and delivering it to any output destination. As an option, this is also available as a toggle for those who want to return to the legacy experience or simulate Deliver. New deliver options include Send to FTP server, Send to Email, Send to Web, or Deliver to Web. Additionally, on Windows and Mac, the Save for web feature now includes a new option to enable automatic compression of images to make them more efficient. Adobe also made selections private by default to make more pieces of information in the timeline available in streamlined workflows. Lastly, selecting a layer in one instance and bringing it to the timeline in another removes the layer from the selected instance in the new timeline. The new layers panel lets users find and select drag-and-drop native layers, which are independent and floating user-created layers. Users can combine images, tiles, patterns, and lines into a hybrid layer to produce unique effects such as animation, transparency, drop shadows, and more. New layer behaviors enable users to quickly enhance image effects with a variety of new features. Users can now animate transforms and transitions, insert animation to a guide, link animation to a layer and layer group, and easily animate effects with the

Layer Mask palette. Layers that meet specific filter conditions can receive new effects and other edits through the new Content-Aware Change feature. The new Content-Aware mask features are now available in the Clean Up contextual menu item.

You can hide the rest of the layers without revealing them, and you can move the mask to stitch together the painting. By making use of the tools to fix the image, you can change the painting and correct the errors. You can also make the paint on images more tangible and edit them with different effects. This masks mode is one of the most common photo editing tools. 6. **Smart Objects**: The smart objects also newer PS apps lets you use a new experience for Photoshop. You will be able to edit your images on lightbox. This feature lets you use the smart objects to edit. You can also convert the shapes and vector images to create the mask.
