Make sure when modifying

image changes that you don't lose any of the original image information. This can be done by checking the option to preserve the edit history. Creating custom colors. We created this color with the Curves tool and the Hue/Saturation tool. In this example, I increased the saturation of the color. The result was this warm blue. The Curves tool has settings for a variety of standard colors, like pastel, light, medium, dark, and more. You can easily fine-tune the color by changing the values of the color sliders before saving the colors to your hard drive. Improving the edge of an image. Adobe's flagship application is a full-blown image-editing software. From tools that manage layers to styles and adjustment tools to image retouching and creations, there are hundreds of features designed to make creative work with photos faster and easier. Colour Management: There are a number of colour modes and controls that Photoshop provides to optimize the colours of your image. Colour management settings are one file type that you can't undo. You can't change the intensity of the colour either, though that is a possible option when there are more than 16 bits of information available. Auto-levels: Luma threshold is so important when it comes to level adjustment, there is no option for one to avoid adjusting the levels of the image. If there is a colour in your image, this is the size of that colour that you need to consider. If the image has poor contrast, the white balance setting can help in obtaining the correct temperature for the skin. Photoshop has some profound settings to level the picture. Fill Layers: Photoshop has the fill tool that help in filling an area, especially for a big image. It can remove the colour entirely from a part of an image and replace it with a new colour. The blending mode makes sure to have a smooth transition from the old colour to the new one. The removal of a colour portion may be easier on a regular image, but on a large one, you may need to come up with a different way of filling a colour.

Gaussian Blur: It is a filtering technique that helps blur the image and smoothing the details in the image. It is really helpful for adding a soft image. For many Web designers, blur is used to smooth text-based elements like navigation bars and links to give them a much needed smooth look.
