This should actually sound like the software is quite cooperative and competent in the editing department. But the truth is somewhere else; this software still remains quite slow in comparison to some other well-known software, such as Lightroom. It still can't match the speed of a low-end consumer laptop, if you need to quickly show a client a few images and spot edits. Those who are skilled enough, however, can still achieve some impressive work in a short amount of time. This version is apparently the same one distributed on the Mac, as well as the iPad and iPhone that was basically introduced earlier. This version of Photoshop does have a lot in common with the iPad version. There's a lot of redundant functions that are similar on both. In fact, most of the editing features are similar on both platforms. Now that Photoshop is on the iPad and iPhone, users can now still edit RAW and JPG files in Photoshop on the go, or at least browse the list of existing files. Obviously, the "What's new" of the older versions might seem somewhat outdated, but Photoshop is just as well-known as ever. According to Adobe, Lightroom 5 allows you to:

- Open up to four additional panels quickly
- Open files and revert to previous versions more efficiently
- Prevent the loss of photos, adjustments, and effects
- Acceptability of finer details
- Ensure that you can access all your assets
