Much like the base GOM Player, GOM Player Plus can be used to work with just about any video file, except those with an unusual extension (such as those affected by file format.itunes container/X-iTunes-Is-320.m3u files). In addition, the DRM protection system, that would have prevented media files from being played is almost nonexistent in GOM Player 2. It is just a matter of changing the file extension to a text-based file, making the media player execute the embedded TrueCrypt (password protected) container. It is also able to play music that has been encoded with various streaming protocols, such as SHOUTcast and Icecast. GOM Player Plus Updates Every new release of GOM Player Plus 2.3.53 will include a fixed version number, such as 2.3.54 or 2.3.55, in addition to a new update tag.
